## L-TRACKER module

*L-Tracker is an enhancement to the standard Electronic Journal program.*

*The L-Tracker option makes it easier to search for data because transaction header information is stored in a database.*

**LOGIVISION**

210 Laurier, Beloeil, Quebec, Canada J3G 4G7  
Tel : 450. 464.2131 Fax : 450. 464.5673

### System features include:

The L-Tracker option adds several levels of functionality to the standard journal.

- Search for transaction data for any machine or all machines
- Search for transaction data for any store or all stores
- Search for transaction data for a date range
- Search for transaction data for a specific cashier
- Search for transaction data for a specific customer

These filters reduce execution time by limiting the number of records that need to be queried when compared to the standard electronic journal review tool.

L-Tracker also includes tools that can be used to export the electronic journal data to formatted ascii files or to database tables that can be queried by the L-BOSS report engine.

The L-Tracker module provides the ability to view the transaction data, print the journal log for a single transaction or a whole day's transactions, or print the transactions returned by the query results.

The L-Tracker print option can also display reports that show the transaction header details, with amounts and total. This type of report may be required for exception tracking. For example, viewing all transactions for a cashier that included an error correct over a specific data range. Exporting transaction information to database could help with basket analysis, for example you may want to know which products are sold the most in transactions with another specific product.

### L-Tracker DVR interface

L-Tracker offers integration with certain DVR systems. This integration allows you to search for data in the electronic journal files and "play back" the DVR image from that point in time. Locate any transaction and press a button in L-Tracker. You will view the digital security system recording for that transaction.

By tying together the 2 systems you will really benefit from the added security the DVR system provides.

### System requirements

Windows XP or Windows 2000.  
PC PIII 700 or greater with 256 meg ram and 30 gig hard drive.  
L-BOSS and L-POS are required to use this optional module.
